

Flexify 2 Origami

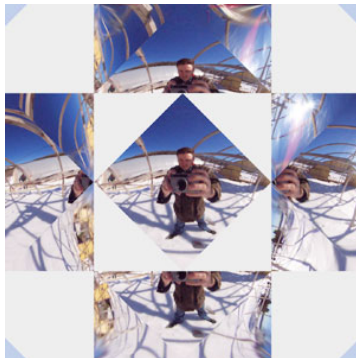

Flaming Pear Software

Paperlock

Paperlock

Balloon

Flexify can warp panoramas into a form that can be folded into this origami figure.

Start with a square of paper face-down

Crease it diagonally

Fold one corner toward the center

Fold all four corners this way

Turn the paper over

Fold one corner toward the center

Fold all four corners this way

Turn the paper over again

Squeeze the middles of the edges so the points puff up

Keep squeezing until the paper starts to become flat again. If you're doing this with a panorama printout, flatten it so the top and bottom of the picture disappear into the fold — not the sides of the picture.

Squeeze it flat

Fold one triangle out and down

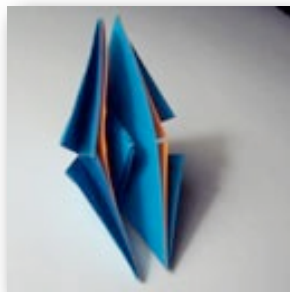

Fold all four triangles this way

Fold a square corner down

Fold all four square corners this way

Turn the paper to get this view

Grasp the wings with your thumbs and carefully open the shape up

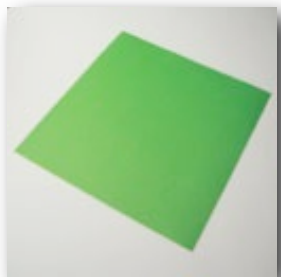

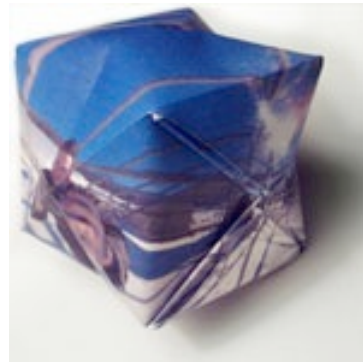

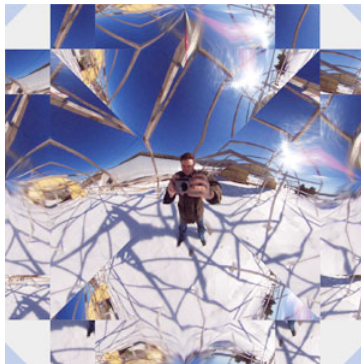

The central square will pillow open

Finish opening and crease it flat.

Balloon

Flexify can warp panoramas into a form that can be folded into an origami figure sometimes called a waterbomb.

Start with a square of paper face-down

Crease it diagonally

Crease it along the other diagonal and the midline

Squash it into a flat triangle

Fold one point up

Fold all four points this way

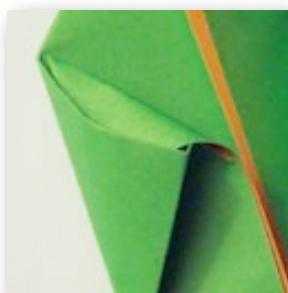

Fold one of the free corners to meet the center

Fold all four free corners this way

Fold down one of the free points

Open up the pocket on the left; curl the point into the pocket

Fold and tuck all four points this way

Open up the shape and find the open end

Hold it by the edges and blow sharply into the hole.
The balloon will inflate.
